4. Course Description

EC 510 *Fundamental Economics

To study on macroeconomic theory including theory of Demand, Supply and Market Structures and Market failure. To study on fundamental of macroeconomic and the fundamental of Mathematics and Statistics for Economic Analytic.

EC 511 Quantitative Analysis for Management

Study econometric models and estimation of economic models, interpret and analyze the estimated result of economic models. The topics also include learning case studies related to economic models by applying quantitative analysis for the organization management.

EC 512 Applied Microeconomics for Management

To study on Microeconomic theory regarding to Consumer Behavior, Producer Behavior, Cost of Production, Price Theory and the Demand and Supply of Input Factors. And also study on Market Structure, Social Welfare, Market failure and Moreover to study on how to applied Microeconomics theory for Business Management.

EC 513 Applied Macroeconomics for Management

The course provides the student the concept of a macroeconomic revolution including Classical macroeconomics, the Keynesian system, New Classical Economic, real business cycle and the New Keynesian economic. General equilibrium, economic growth model, the sustainable in consumption and investment are also provided in this course including the analysis of the case study in current economic policy, monetary and fiscal policy in the open economy.

EC 521 Research Methodology in Economics

Study the principles of research approach, the processes and methods both of quantitative and qualitative research. In additional, preparing the proposal by review the relevant literature, design and development of research tools. Study data types and data manipulation. Finally, writing abstracts and write the articles to publish in academic journals.

EC 531 Applied Managerial Economics

To study on managerial economic theory and applied for organization management. To enhancing economic efficiency and equality for economic and social activities. And also study in the case study of the best practice for Corporate Social Responsibility in private sectors for transparency organization both government and private organizations. Moreover to study on how to manage in both government and paradigm.

EC 532 Strategic Economics

Studying economic concepts related to strategic management, corporate strategy, operational strategy and leadership along with implementing the strategy. Comparing the strategic management between public and private organizations. Analyzing case studies as well as risk management processes and organizational crisis.

EC 533 Seminars in Current Economic Issues

Seminars and analyzes in contemporary management economics to provide the specific knowledge in term of Sufficiency Economy, Community economy, Creative economy Digital economy and Including related political issues.

EC 631 Economics of Project Analysis and Evaluation

A study of the concepts and issues related to the planning and evaluation of projects, including the features, specifications, and codes of conduct of the project. Analysis and project preparation. Techniques of planning and evaluation of projects. The synthetic study in evaluating projects both public and private sectors.

EC 632 Economics of Financial Management

A study of the management of monetary and fiscal policies, various techniques of financial management, economic factors which affect decision-making, financial statement analysis, some issues, with problem solving, of financial management in both public and private sectors.

EC 633 Economics of Logistics Management

Study logistics and supply chain systems in production, distribution, economic theory related to logistics and supply chain system, analysis and planning on logistics and supply chain systems, domestic and international management in both the public and private sectors.

EC 634 Analysis of Policy and Economic Environment

Analysis of the role of government in the economy. The economic policy of the state. Analyzes the impact of policy measures to the business sector. Study social welfare and the role of the private sector in formulating policies and economic measures.

EC 635 Information Technology and Innovation for**Economist**

Systematic studying processes, definitions, planning, management of information technology and organizational innovation. Analyzing the needs of information technology and innovation. Studying case studies to improve the organizations' management processes in an efficient and cost-effective manner.

EC 636 Game Theory for Business Management

Studying game theory which used in business decision making. Applying game theory to define business strategy. Pricing of goods and services including investment and business competition.

EC 637 Economics of Organization and Human Resources**Management**

Study the concepts and theories of organizational management, human capital investment, education and training, health and labor mobility, and human resource management in public and private organizations. In addition, consideration of the manpower planning, selection and recruitment, compensation and welfare, labor relations, evaluation of work. Finally, design the organizing information systems and human resource management strategies to keep pace with global change.

EC 638 Economic Development in Globalization

Analyzing the paradigms of economic development theory as well as the evolutions and facts about the inequalities. Studying structural changes in the trading system, investment and financial system, the effects of technology changes on industries, agricultural and service sectors. Synthesizing responses of the changes in globalization to develop sustainability.

**EC 639 Economic of International Trade and Financial
Management**

A study of international trade, international finance, and its applications to economic policies, with attention to the balance of payments, adjustment of the balance of payments, relationship between international trade and economic growth and development, international investments and multinational corporations, effects of exchange rate changes, and international trade and finance policies.

Doctor of Philosophy Program in Economics

Ph.D. (Economics)

The Ph.D Program in Economics provides students with the theoretical and empirical tools comprehend assess and analyze the many pressing issues and problems of society in an economic context. Areas of study include basic for the first year level in mathematical economics (non-credit) and advanced economic subjects such as advanced microeconomics, advanced macroeconomics, advanced econometrics as well as the research methodology in economics. Furthermore, students in second year level can choose 2 subjects out of 8 subjects as their elective courses.

To continue in the Ph.D Program, students must complete a qualifying exam at the end of the second year.

4. Course Description

EC 617 Mathematical Economics

Study of matrices and various determinants such as Jacobian, Hessian, bordered Hessian determinants. Apply static analysis and comparative analysis, concept in input-output model, consumer behavior theory, production theory and IS-LM model. The application of differential equations and difference equations to explain dynamic economic analysis is also provided.

EC 711 Advanced Microeconomics Theory 4(4-0-8)

Study of consumer theory, intertemporal choices theory, producer theory, economic market, game theory, general equilibrium model, welfare economics, market Failure, asymmetric information, externality, and public goods

EC 712 Advanced Macroeconomics 4(4-0-8)

Study of macroeconomics theory from various schools of thought, general equilibrium analysis, economic growth models, rational expectations, real business cycle (RBC) theory, dynamic analysis of the Keynesian model and other models, open economy

models, the effects of anticipation on exchange rates, fiscal policy and monetary policy in the open economy, problems of international monetary system in globalization and other macroeconomics problems, such as employment policy.

EC 713 Advanced Econometrics

4(4-3-6)

Study the econometric models and estimation of time series econometric models such as distributed log model, ARIMA model, error correction model, co-integration analysis, vector auto-regressive model, and impulse-response analysis.

EC 771 Research Methodology in Economics and Workshop

3(2-2-5)

Study of principle, approach, process, and methodology for research in economics, the structure and pattern of research, developing a research topic, writing a research proposal, analysis of literature review, research design, developing economic tools for research, computer application for research, data and data management, data collection and data analysis, preparation for research presentation.

EC 821 Public Economics**3(3-0-6)**

Study of Public economics theory concerning public sector management with cost-benefit analysis concept in order to gain efficiency and equity in economy and society. Including economics of taxation, government transfer, public debt, social welfare concept, social insurance theory, the optimum circumstances, and policy implementation on social welfare

EC 831 International trade theory and policy**3(3-0-6)**

Study of the comparative advantage and empirical case studies; analysis of international trade policy, economic integration, and international factor mobility; and study relationship between international trade, economic growth, and economic development

EC 832 International Monetary Economics**3(3-0-6)**

Study of principles and models in international monetary theory and open economy macroeconomics, theory of exchange rate determination, foreign exchange market, the balance of payment under different exchange rate regimes and the adjustment

macroeconomic policy in an open economy, the international monetary system and global financial imbalance.

EC 841 Health Economics **3(3-0-6)**

Study of the applied economic theories of health care resources allocation and health care services. The study of demand for health and health care, the supply of health care, efficiency and equity in health services including health system reform and health insurance policy.

EC 851 Human Resource Economics and **3(3-0-6)**

Human Resource Management

Study of theories and models which involve human resources, population, change in population and investment human capital such as education, public health, and social welfare. And study of the demand and supply of labor, wage determination, human resource management in public sector and private sector and human resource development policy.

EC 852 Economics of Education **3(3-0-6)**

Study of the role of education in the development of manpower, demand and supply of education, investment and return of

education, human capital valuation policy and planning manpower in education including the role of public and private institutions in education.

EC 861 Selected Topics in Advanced Economics 3(2-2-5)

Study of the selected topics in advanced economics, both in quantity and quality methods subordination of individual interest to management, the application of environmental and economic situation with happening in country or international levels and writing an academic report.

EC 862 Individual Study 3(2-2-5)

In-depth study of a specific topic and tools under student's interest using analysis, synthesis, and presentation supervised by an instructor with relevant field of specialization.

GRD 891 Dissertation (in English) 36 Credits

Advanced research towards academic creativity, Integration of various fields in economics, and applying for new knowledge related to the research problems in economics.
